

Startmicrophone SM8 Speech Amplifier SV4-SM Headset Q34

The Startmicrophone SM8 is used for all sports that are started with a start gun (e.g. athletic, triathlon, cycling, swimming, speed skating, short track, cross country).

The start shoot of the gun triggers an electric impulse in the Startmicrophone. This electric impulse triggers the timing device. The Startmicrophone you can screw on the start gun.

If you connect the Startmicrophone with the Speech Amplifier SV4/SM, than a speech communication is possible with the headsets Q34. For this speech communication you use the same two-wire cable as for the start impulse.
